

Test Printing

2 August 2004

This is a file for testing the printing of PDF documents from the [DELTA Web site](#). The page size is 212x288mm — intermediate between A4 and Letter paper. The file contains two pages. Each page contains a header and page number at the top, and a 2-line paragraph at the bottom.

It should generally not be necessary to use the ‘Scale’ option in the ‘Print’ dialog of the Acrobat Reader. However, when printing on Letter paper from Acrobat Reader 5, it may be necessary to use the ‘Auto-rotate and center pages’ option.

If your printer has PCL and PostScript drivers, the PostScript driver may give better results, particularly with Acrobat Reader 5.

This paragraph is at the bottom of the first page. It contains 2 lines. Its purpose is to check whether cropping occurs at the bottom of pages printed on Letter paper.

This is the first paragraph of the second page. This page is included so that you can test double-sided printing.

This paragraph is at the bottom of the second page. It contains 2 lines. Its purpose is to check whether cropping occurs at the bottom of pages printed on Letter paper.
